Practical 2

Aim:
To design and develop a responsive website using Bootstrap framework.

Theory:
Bootstrap is a popular front-end framework used for developing responsive and mobile-first websites. It provides pre-designed components such as navigation bars, cards, buttons, forms, and grids that help developers create attractive and responsive web pages quickly.

The Bootstrap Grid System divides the webpage into 12 columns, allowing content to adjust automatically according to different screen sizes such as mobile phones, tablets, and desktops.

Features Used:

- Bootstrap Navbar
- Bootstrap Grid System
- Bootstrap Cards
- Bootstrap Buttons
- Responsive Layout

Procedure:

1. Create an HTML file.
2. Add Bootstrap CDN links.
3. Create a responsive navigation bar.
4. Use Bootstrap Grid System to create columns.
5. Add Bootstrap Cards for content display.
6. Add buttons and footer.
7. Run the website in a browser and test responsiveness on different screen sizes.
